PORTLAND, OREGON

Return Postage Guaranteed

*A Portion of
Our Planting at
Blossom Time*

Your Success Means Our Success

IT IS with a great deal of pleasure we again send you our Peony list. While we have not seen the fruition of all our hopes and plans, we are deeply grateful for the success that we have had, and we come to you at this time with the feeling that in the very near future conditions will tend to become more stabilized.

We are exerting every effort to produce the very best stock that is possible to grow, and in our thirty-six years' experience we believe we have never had better stock to offer than we are offering this season. We feel sure that you will be more than pleased with the stock we will send you.

Samuel Hill, a new single peony of exquisite beauty resembling a huge apple blossom, blooms are often eight to nine inches in diameter. This is one of the finest Peonies we have ever introduced. It blooms in mid-season.

You are invited to visit our garden at blooming time. See several acres of beautiful blossoms from pure white to darkest red. The new Barbur Boulevard, S. W. Pacific Highway, runs through our planting $2\frac{1}{4}$ miles, S. W. of city limits. Also visit our show room at our residence, three blocks north and one block east of West Portland School.

We want your good will and are willing to earn it, therefore we want you not only to be satisfied, but so well pleased that we will get inquiries from your friends, saying Berneche's peony roots were recommended by you.

We believe a spoken word of praise from a satisfied customer is the best advertisement possible.

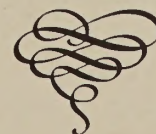

How to Plant

PEONIES

Spade soil 18 to 20 inches deep, if subsoil is poor remove and fill with top soil. Use bone meal, well mixed with soil. Now plant the roots so the eyes are $2\frac{1}{2}$ to 3 inches below the surface after soil is level, pressing soil tight against the roots. **DO NOT USE FRESH STABLE MANURE AT ANY TIME.** Cultivate freely during the dry season.

We begin shipping roots about September 10 to 15, and *do not ship Peonies in the Spring.*

Since most Peonies are planted in the fall, the late planter must necessarily take the leavings, no matter where he purchases. It is impossible to dig and divide Peonies in the spring without greatly injuring them. Fall is the natural time to plant, besides Peonies planted in the fall may reasonably be expected to bloom the following season.

**SUCCESSFUL GROWERS
OF PEONIES
FOR 36 YEARS**

Mme. Emile Debatene

HYBRID LILACS

Known also as FRENCH LILACS

Lilacs thrive best in a sunny location and in a well drained soil. They prefer a neutral soil and are benefitted by applications of lime over the soil above their roots, if the soil is inclined to be acid. Bonemeal is one of the best fertilizers to use. This may be mixed with the soil at the time of planting, at least a pint to a bush, and should cover an area at least 2 feet in diameter.

Our lilac stock is propagated on their own roots, also grafted and budded, and all are established on their own roots before being sold. They are stocky, well developed plants, even in the smaller sizes, and with proper planting and care usually bloom the second year. They need be planted only slightly deeper than they were in our gardens. We do not prepay transportation on lilacs and recommend express shipments.

Sizes and prices:

12 to 18 inches	\$1.50
18 to 24 inches	2.00
2 to 2½ feet	2.25
2½ to 3 feet	2.50
3 to 4 feet	3.00

(S) indicates single, (D) indicates double.
